Test Automation Workshop

Our Intelligent Test Automation and Performance Workshop pairs you with our quality engineering leaders to share how these capabilities can align to achieve your business objectives. During the workshop, we'll explore industry trends around modernizing integration workloads to improve your application quality, functional coverage, agility and performance.

Workshop Goals

- Identify your current business and system landscape
- Identify potential areas of improvement leveraging scientific testing techniques
- Identify levels, types and areas to build intelligent automation and performance tests that deliver a range of real business outcomes accelerators and tools

Test Automation Strategy

- Define business value through test automation
- Map testing objectives to business outcomes; plan; execute and measure
- Focus on component tests to reduce testing and costs later
- Build intelligence into automation through Prolifics' next gen accelerators and tools
- Improve quality; reduce risk and costs; increase speed of adoption of software by business

Prolifics Strategic Workshops empower you to achieve a successful digital transformation and accelerate your business. Our experts peel back the layers to understand your challenges and objectives and create a roadmap to drive your business outcomes.
Engage with us across the entire spectrum, or at any point in this journey.
